HR Analytics Dashboard Project

Submitted By: Gunjan Singh

Course: Data Analytics

Tool Used: Tableau

Problem Statement

The objective of this project is to analyze employee data to understand workforce distribution, employee performance, and attrition trends. The goal is to build an interactive dashboard that helps organizations make data-driven HR decisions.

Dataset Description

The dataset contains employee-related information such as:

- Employee ID
- Department
- Gender
- Job Role
- Salary
- Attrition
- Performance Rating
- Education
- Experience

This dataset is used to analyze employee behaviour and organizational trends.

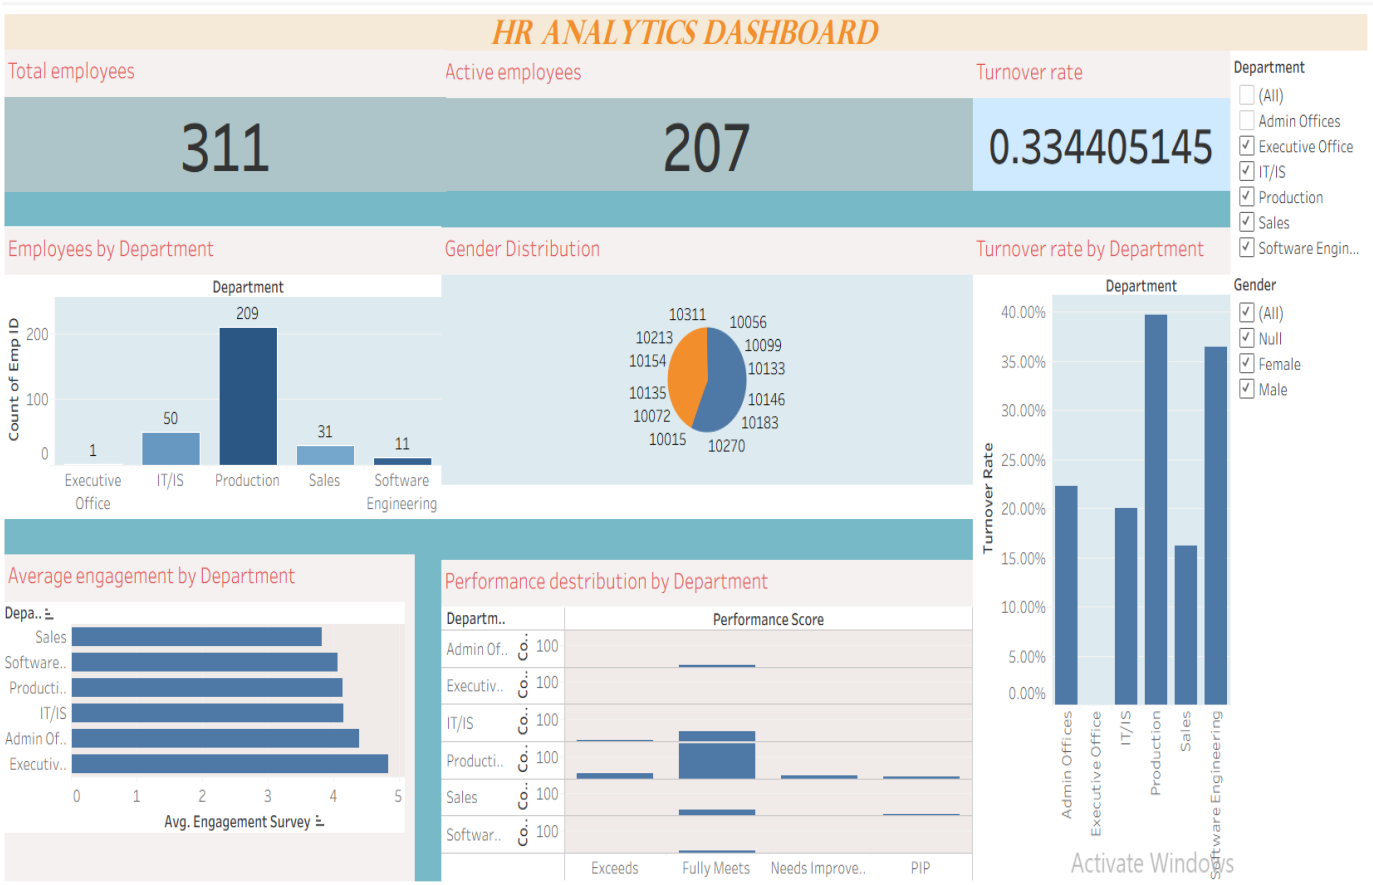
Tools & Technologies

1. Tableau (for dashboard creation)
2. Excel/CSV dataset

Dashboard Overview

The dashboard includes the following key components:

- Total Employees KPI
- Active Employees KPI
- Turnover Rate KPI
- Department-wise employee distribution
- Gender distribution
- Performance analysis
- Filters for better data interaction



Key Insights

1. The company has a total of 311 employees.
2. The turnover rate is approximately 33%, indicating a moderate attrition level.
3. Certain departments have higher employee counts, showing uneven workforce distribution.
4. Gender distribution shows variation across departments.
5. Performance ratings suggest that most employees fall under average to good performance.
6. Attrition is higher in specific roles, indicating potential improvement areas.

Conclusion

This project provides valuable insights into employee data and helps identify key areas such as attrition, workforce distribution, and performance. The dashboard enables easy visualization and supports better decision-making in HR management.

Future Improvements

- Add predictive analysis for attrition
- Integrate real-time data
- Enhance dashboard design with advanced visuals
